SECTION 01

Company introduction

Who Cognirise is, what we do and how
we deliver

An AI-native advisory and engineering firm.

Headquartered in the UAE, with delivery capabilities in the US, Netherlands, India and Turkey.

WHAT SETS US APART

Deep Industry expertise

Human + agents workforce

Offshore capability, 4,000+ engineers

Sovereign by design

Outcome-based model

Consulting & engineering with AI

- Digital transformation
- AI strategy & roadmaps
- Data & AI governance
- Change management & AI literacy
- AI value realization
- Platform build & SDLC automation

Agentic solutions

- Digital AI workforce
- AI agents in service delivery
- AI agents in shared services

AI platforms

- Voice & call centers
- HR
- Data Automation
- SDLC automation & application modernization
- Loyalty solutions

A New Model for the Agentic Era.

Humans and AI agents working as **one team**.

FORWARD DEPLOYED ENGINEERS (FDES)

Senior transformation professionals embedded inside the client organization.

- Understand operations from the inside
- Work directly with executives and teams
- Bridge strategy and offshore execution
- Deploy and direct the agent guilds
- Stay until the outcomes are achieved

HUMANs + AGENTS

FORWARD DEPLOYED AGENTS (FDAS)

Specialized AI agents that augment the FDE team — organized into guilds.

- Speed: work at machine pace on complex tasks
- Scale: multiple agents operating in parallel
- Consistency: no variation in quality or process
- Knowledge: instant access to all prior work
- Execution: from analysis to action without delay

2–3×
Faster go-to-market

40%
Operational productivity boost

50%
Development cost reduction

We have a proven blueprint for **scalable AI value**.

01 Innovate

Spot the value

- Don't boil the ocean

02 Demonstrate

Prototype

- See it before you buy it

03 Activate

Build the Solution

- Human judgement. Agent scale.

04 Operate

Scale & Operationalize

- No lock-in. Full Ownership

1 day

48 hours

2-4 weeks (MVP)

4-12 weeks

SECTION 02

Where we **can** help.

Example areas where Cognirise can help financial services organizations

One bank. Three levels of AI value.

L1 Individual Assistants

AI assistants for every employee.

Every banker gets an assistant that drafts, summarises, searches policy and prepares meetings.

+30%

8 weeks

Productivity gain target

Time to value

L2 Agentic Functions

AI-powered domain processes.

AI takes over whole steps inside credit, operations, compliance and servicing — with human gates.

+50%

3–6 months

Productivity gain target

Time to value

L3 Agentic Enterprise

Autonomous agents at scale.

Agents run end-to-end processes, decide inside policy, and continuously optimise the outcome.

+70%

6–12 months

Productivity gain target

Time to value

The ambition at every level is the same: additional capacity created without additional hiring.

Six areas where we can create value with AI.

Credit & Lending

AI reads the file, scores it against credit policy and drafts the decision on — analysts spend their time on judgement, not extraction.

EXAMPLE USE CASES

- RM meeting preparation and client briefs
- Credit file and collateral summarisation
- Automated pre-screening and risk tiering

Risk & Fraud

Models watch transactions and portfolios continuously, ranking what deserves a human look instead of flooding analysts with alerts.

EXAMPLE USE CASES

- Real-time transaction anomaly detection
- AML alert pre-screening and prioritisation
- Portfolio stress testing on demand

Operations & Process

Agents remove the manual touchpoints from the middle and back office, so people handle only the exceptions.

EXAMPLE USE CASES

- Onboarding and document verification
- Straight-through processing in the workflow engine
- Automated reconciliation and reporting

Customer & Sales

Every customer gets the right message at the right moment, and every banker gets the context before the conversation starts.

EXAMPLE USE CASES

- AI voice and chat servicing
- Next-best-action recommendations
- Churn prediction and retention offers

Engineering & IT

AI writes, reviews and tests code, and reads the legacy nobody wants to touch — delivery accelerates without more headcount.

EXAMPLE USE CASES

- Coding assistants across the engineering team
- Automated test and regression generation
- Legacy code analysis and modernisation

Compliance & Regulation

The regulatory corpus becomes searchable and self-monitoring, with every answer traced back to its source.

EXAMPLE USE CASES

- Regulation and internal policy search
- Circular and rule-change impact analysis
- KYC and regulatory reporting automation

Example starting points to consider.

01

AI-Powered Core Banking Operations

Agents take on the process-heavy, rule-bound core — credit decisioning and the RM desk first.

< 1 hr

Clean-file credit decision, from 2–3 analyst-days

45–60 min

Recovered per RM client meeting

100%

Auditable gates — explainable to the regulator

02

AI-Powered Contact Centre

Voice AI that sounds human, serves and sells, and never sleeps — powered by Lupitor.

On-prem

Voice and data never leave the bank

In + Out

Full inbound and outbound automation

Actions

Executes payments, updates and scheduling

03

AI-Powered Software Delivery

The bank's engineers amplified — starting where AI output can be mechanically verified.

50%

Reduction in delivery lead time

80%

Productivity gain in requirements

60%

Productivity gain in testing & QA

04

AI-Powered Marketing Intelligence

Know which spend drives growth, and act on every customer at the right moment — with Ekimetrics.

60%

Marketing ROI increase from mix modelling

+40%

Customer lifetime value via orchestration

< 3 mo

Time to first measurable impact

Example: AI voice agents for sales & service.

A voice platform a regulated bank can deploy.

Sovereign by design

Deployed on-premise, inside the bank's own perimeter. Voice and customer data never leave the institution, and local deployment removes external network hops.

Proven on-premise

15 on-premise deployments already delivered with regulated enterprises, built for SOC 2, GDPR, SAMA and CBUAE data-residency requirements.

Engineered for reliability

Sub-0.05% hallucination rate on the HHEM benchmark. A second guardrail model checks every response for accuracy and compliance before it is spoken.

80+ languages, natively

Arabic with local dialect, English, and the languages a Kingdom bank actually serves — Urdu, Bahasa, Hindi, Tagalog and more.

Natural voice, low latency

Answers in under two seconds with natural turn-taking. Interruptible mid-sentence, and it keeps track when a caller corrects themselves.

A tailored demo in one week

A working agent, built on one of the bank's own call types, agreed and demonstrated within a week — before any commitment is made.

SECTION 03

Proven **work.**

Selected Cognirise delivery in financial services

Delivered for financial services organizations.

EXAMPLES

Leasing arm of a regional bank

LEASING

CHALLENGE

Leasing quotes and credit decisions took days of analyst work across ERP, PDFs and rules.

APPROACH

Agentic decisioning — a rules engine plus specialist agents feeding a gated decision tree.

IMPACT

Offer plans produced in seconds; every decision logged against the regulatory ruleset.

Commercial bank — credit risk

BANKING

CHALLENGE

A credit team tracked a multi-billion portfolio by hand; signals were reviewed after the fact.

APPROACH

Portfolio early warning, disclosure watch and concentration analysis, with human-gated actions.

IMPACT

Concentration, exposure and risk signals visible daily; scans propose actions analysts approve.

Asset management firm

ASSET MANAGEMENT

CHALLENGE

Investor questions reached the call centre and advisors; answers varied and were slow.

APPROACH

Bilingual investor assistant grounded on fund documentation, with non-advisory guardrails.

IMPACT

Questions answered instantly with sourced responses; advisors handle only the judgement calls.

Investment bank — call compliance

CAPITAL MARKETS

CHALLENGE

Internal audit could only sample brokerage calls; breaches were found late, or not at all.

APPROACH

Speech-to-text over every call, four risk gates, an audit agent and a coaching queue.

IMPACT

71% gate pass rate; critical calls routed to a 24-hour review queue with targeted coaching.

State bank — virtual branch agent

RETAIL BANKING

CHALLENGE

Branch telephones go unanswered at peak; customers who cannot reach the branch give up.

APPROACH

On-premise voice agent: intent detection, entity extraction, enquiries and consent gating.

IMPACT

Sub-2-second responses, every call resolved or routed with a code, nothing leaves the bank.

State bank — market radar

PRODUCT & STRATEGY

CHALLENGE

Product teams learned about competitor launches and regulation weeks after the market did.

APPROACH

On-premise research agent across rival channels, app-store reviews, regulators and news.

IMPACT

Opportunity cards with source, insight, priority and action — each one fully explainable.

Thank you!
